LEAVING A SMALL
FOOTPRINT ALONG THE WAY.

Beautiful natural stone surfaces make a big impact on you...not the environment.

C A M B R I A[®]

Cambria Production Facility, Le Sueur, MN

PROTECTING OUR ENVIRONMENT IS SECOND NATURE.

We live and work in a small community surrounded by farms and the bounty of nature. So it's only natural we do all we can to protect our home – and the world around us. We use sustainable best practices where we mine, throughout our production and fabrication processes, and all the way to your home or business. Because in the end, we want our natural stone surfaces to make a big impact on you, not the environment.

RESPECTFUL OF OUR RESOURCES

- Cambria is quartz, one of the most abundant minerals in the world
- Quartz is removed from the Earth in particles, not full slabs, so there is much less waste and disruption to the natural beauty of the surrounding landscape
- North America is our primary source of quartz to minimize our carbon footprint
- The vast majority of our competitors' products are manufactured overseas
- We work with our mining partners to fully restore every quarry when mining is completed

SUSTAINABLE PRACTICES ARE BUSINESS AS USUAL

- 100% of the water in our plants is recycled
- On-site storm ponds irrigate the grounds of our production facility
- Ongoing implementation of energy-saving procedures with the Department of Energy
- Majority of our fleet vehicles are hybrids
- Scrap material is used as road base on local construction projects

CERTIFIED FOR SAFETY

- NSF 51 certified safe for use as a food preparation surface
- GREENGUARD Gold Certified for low VOC emissions
- Radon free
- Contributes to LEED points; one point for a low-emitting surface and ¾ point for being locally manufactured within a 500-mile radius of Le Sueur, MN – with no upcharge
